

XAURUM
Adding Value.

Golden Solution

Bringing Real Value To Crypto

Xaurum is the only digital asset with a **continuously growing gold base**. Together with the blockchain technology, it guarantees the highest level of security backed by transaction transparency on the public ledger. Xaurum is present since 2015 and its history is measured in gold, all its economic activity leaves traces of gold behind and **preserves and increases its value**. Xaurum is dedicated to bringing **stability and value** to the turbulent financial markets where devaluation of property is happening daily. The problem of **storage of value** is a problem of money in general, one that Xaurum solves by creating a representative cryptocurrency with a continuously growing gold base.

Roadmap 2018

More Xaurum more gold

With inflation the purchasing power of currency is falling. As inflation rises, every dollar, euro or any other currency you own, buys a smaller percentage (amount) of goods or services. On the other hand Xaurum's money supply grows slower than its gold reserves, this is the main innovation of profitable inflation*. With each newly issued XAUR, all XAUR's get backed with more gold and their value in gold increases, which makes Xaurum stand out in the world of finance.

* term profitable inflation was first mentioned with Xaurum project

More transactions more gold

Grew tired of numerous fees in the current financial system? With each transaction, 0.5 XAUR is taken off the market leaving behind gold dust that covers all of the remaining Xaurum. Incorporated fee in every transaction means more gold for every XAUR holder. Every transaction improves the XAUR/Gold ratio with burning of Xaurum in favour of community.

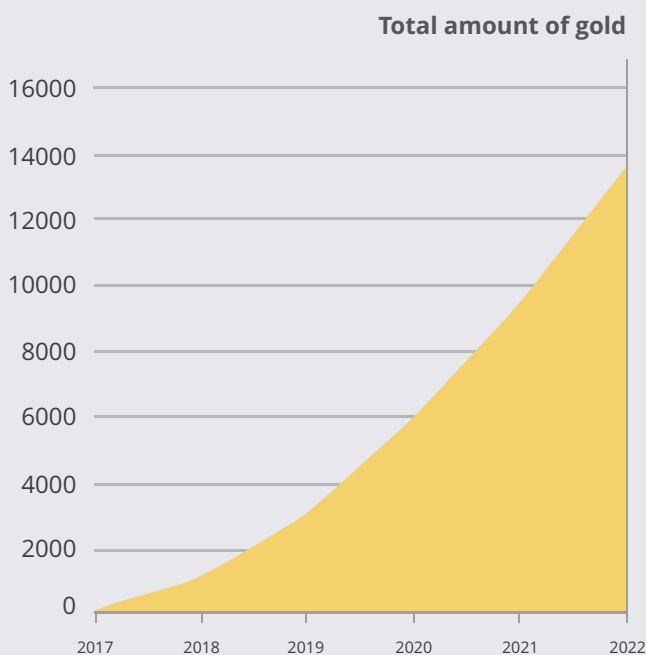

5 Year Growth Projection

From March 2015 to the middle of 2017 Xaurum business model was developed and deployed on Slovenian market with population just above two million. In this manageable and easily measurable environment the **Xaurum Masternode business model has proven to be successful**. Xaurum's way of direct marketing and other marketing activities was extremely successful in recruiting loyal customers: There was almost no monthly savings drop out, we managed to retain more than 98% of the clients.

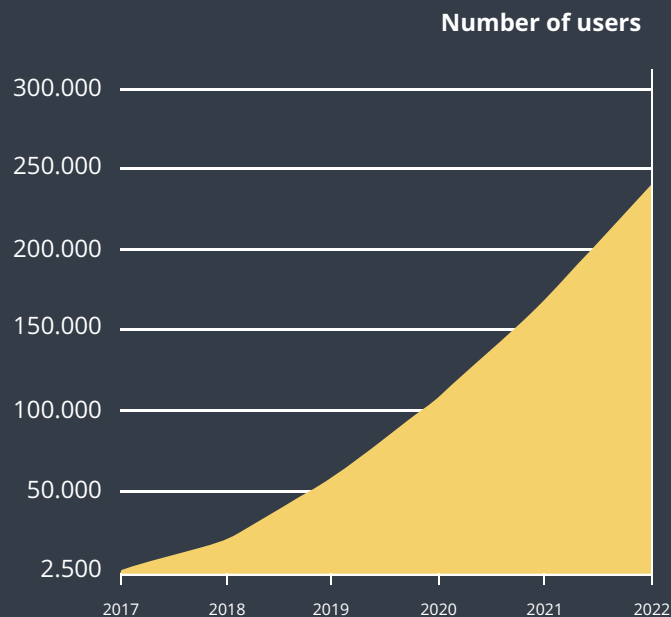

On the basis of a modest set of variables, Xaurum will gather more than **5 tons of gold in just three years**, representing more than a **4000% increase of gold reserves**. Pessimistic projections according to the current events on the market, show that with this amount of gold the price of Xaurum on the market could exceed 15 USD, which also means at least an 5000% increase. In 5 years **Xaurum will accumulate more than 13 tons of gold and more than 200.000 users just via direct sales until 2022**.

We will continue to strive to increase public awareness on investment risks and disseminate general knowledge on blockchain technology.

The future growth of the crypto market is something we can expect, especially if it's backed by gold.
